

## AXXICON ISO MANUFACTURED

Victrex is a leading global manufacturer of high performance polymers, comprising two divisions: Victrex Polymer Solutions who focus on transport, industrial and the electronics markets and Invibio Biomaterial Solutions who focus on providing specialist solutions for medical device manufacturers. For their headquarters, based in the UK, Axxicon manufactured an electrical heated AIM mould to produce test specimens for material property testing.

Victrex main reasons to prefer the electrically heated AIM mould above the standard AIM mould:

- Economic benefit
- Easy to integrate and to service
- Suitable for clean environments
- Safety benefit (no heated / pressurized liquids needed)
- Suitable for rapid heat up and local heating
- Suitable for relatively small specimens and small series

Our AIM business still provides us with exciting opportunities. We have gladly taken on the challenge of producing this electrically heated AIM mould. We are very proud that we have lived up to Victrex's expectations.

Have we raised your interest in an electrically heated AIM mould or any of our other AIM products and services, please feel free to contact us.

Best regards,

Axxicon AIM Team
